

## Invisible Ceiling Suspension (Cavity Ceiling)

1 Hold sculpture by hanging points and position as desired, ideally distancing the sculpture approx. 20-30 cm from the wall (at the closest part).

2 Measure distance between the two points that the line is tied on and make marks on ceiling.

3 Tie nylon line (fishing Line) around rod and tie into a knot, so that sculpture is hanging at desired height.

4 Drill 5-6 mm holes in ceiling and push rod with attached line through hole.

5 Move around to make sure rod is central over hole and pull lightly to ensure it isn't going to fall out.

6 When you are happy with the way it is hanging put a little filler around the hole in the ceiling.

## Hooks + Loop System for flexible positioning suspension
